

Why are your Baptistery Heaters more Expensive than others?

There are 3 main reasons why the Piedmont Fiberglass Baptistry heater is more expensive than other similar models?

1. *Our heaters are assembled.* Why would anyone send you a box of parts and expect you to assemble them?
2. *Our heaters are tested.* Each Piedmont Fiberglass PBH heaters is fully tested to make sure they are properly operating. After each unit is assembled, we connect them to an actual baptismal pool for testing. Testing includes pump operation, proper heating, and inspections for leaks are just a few of the tests that we perform on each unit.
3. *Titanium Heater Elements.* Piedmont Fiberglass opted for the more expensive titanium heater element. Many times plain steel elements will develop calcium buildup on the element which causes early failure. Piedmont Fiberglass was the pioneer in the use of titanium elements in baptistry heaters.
